

Tools needed:

Electric Drill
Level
Hammer
Tape measure.

Items supplied in Wall bracket kit:

- 2x wall brackets
- 6x carriage bolts
- 6x M10 washers
- 6x wall plugs
- 1x 10mm masonry drill bit
- 1x 13mm spanner
- Drilling template

Instructions:

1. Measure where the wall bracket will be placed on the wall and make your marks.
2. Place the template on the wall in the required position. Use the level to ensure the template is straight.
3. Drill the holes indicated on the template.
4. Remove the template from the wall.
5. Insert the wall plugs and tap in with the hammer if necessary.
6. Place the wall bracket in position over the holes and insert the carriage bolts with the washer.
7. Tighten the carriage bolts with the spanner but not too tight in order to allow the wall bracket to swivel against the wall.
8. Mount the speaker on to the pole.
9. Tilt and turn the speaker to the desired angle and tighten bolts.
10. Swivel wall bracket on the wall in order to straighten speaker.
11. Tighten carriage bolts to secure wall bracket against the wall.
